Weston Response To Groundwater Monitoring Comments From RMT Inc.

Response To Comment 3:

It is recommended that all parameters listed in Table 1 should be analyzed for at least four monitoring events. Based on the results of these monitoring events a decision should be made if the parameters listed as not to be included in the monitoring program in Table 1 can be eliminated.

Response To Comment 4:

It is recommended that probes that have exhibited presence of methane gas during monitoring events should also be included in the monitoring program.
